

Kardec — Markdown ingest

Kardec accepts raw **CommonMark** as an alternative to the fluent builder. Body text flows through the same layout engine, so headings honor the **named-style table** and paragraphs benefit from line breaking.

What is supported

- Headings 1 through 6
- Bold, italic, and combined bold-italic runs
- Unordered and ordered lists (*flattened to bullets in v0.1*)
- Horizontal rules become page breaks
- Code blocks render with the StyleCode named style

What is not (yet)

- Inline links keep the visible text only — URL is dropped
- Images render as TODO stubs (next milestone)

Tables (GFM)

Month	Revenue	Δ
October	R\$ 12,000	+5%
November	R\$ 14,500	+12%
December	R\$ 13,200	-9%

Closing

The same Document can mix DSL calls and AppendMarkdown — for instance, seed a frame with the builder, then append a CHANGELOG file's contents verbatim. The resulting PDF is a single, coherent document.
