

Math typesetting in Kardec

v0.3 introduces a LaTeX math subset (see RFC-001 §16). Greek letters, fractions, square roots, sub/superscripts and big operators (sum, integral, product) parse and lay out.

Pythagoras:

$$a^2 + b^2 = c^2$$

A fraction:

$$\frac{a + b}{c}$$

Square root:

$$\sqrt{x^2 + y^2}$$

Summation in display style:

$$\sum_{i=0}^n i^2$$

Integral with bounds:

$$\int_0^1 \frac{1}{x} dx$$

Greek letters in formulas: alpha, beta, gamma all map to glyphs in Latin Modern Math.

$$\alpha + \beta = \gamma$$
